AUTOMOTIVE

THE BETTER WAY TO PLM

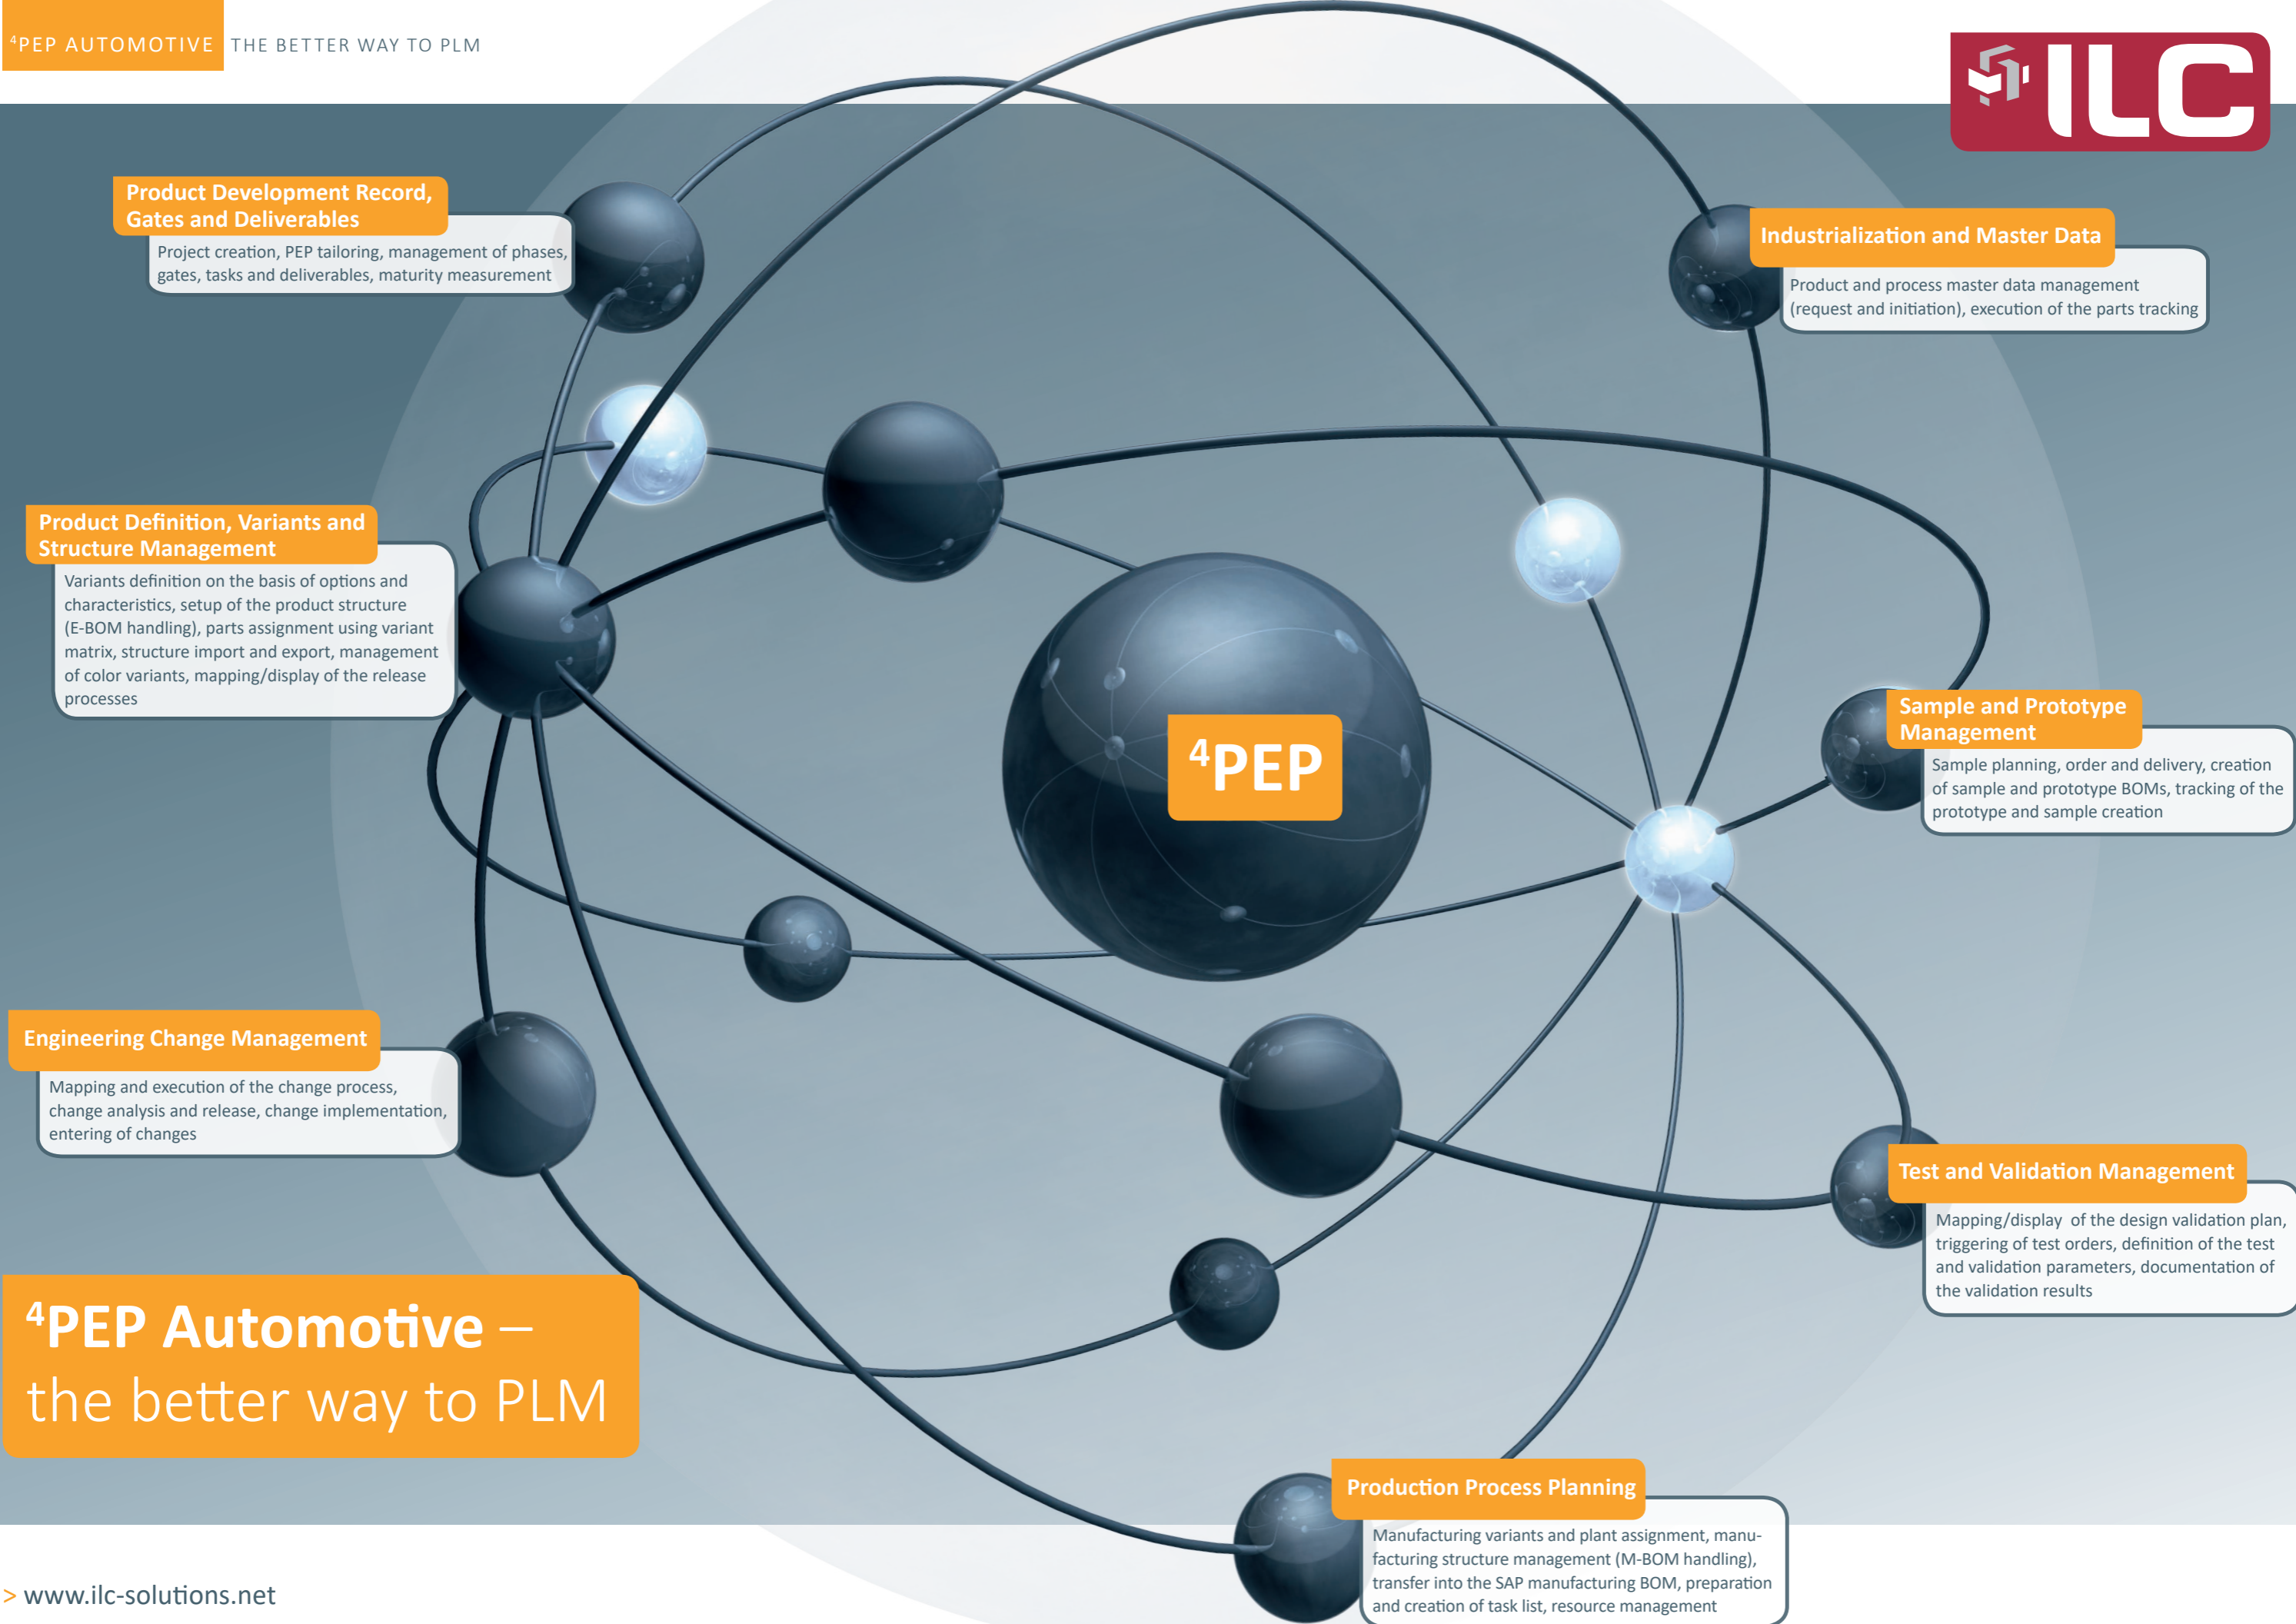

4PEP Automotive — Technologies for the mobility of the future

The automotive industry is one of the most important and most innovative sectors in Germany and Western Europe. With a strong capacity for innovation, the automotive industry is constantly developing trend-setting technologies for the future. However, the way to a successful product launch can be bumpy and risky given the potential conflicts of e.g. range and model diversity versus cost and time pressure, let alone an intensifying global competition.

A considerable long period of time passes between the beginning of the development project to the start of production (SOP), which leaves room for an enormous potential for optimization:

- structured management of the development process and transparent mapping of the development stages,
- setup and management of product structures that meet the different perspectives and requirements from Engineering, Production/Logistics,
- entering of the results of the Product Development into Logistics and Production,
- controlled sample and prototype management on the basis of development stages,
- integrated test and validation management in order to continuously measure the development results against the requirements,
- comprehensive and transparent change management that can be seamlessly integrated with Product Development as well as Production.

With 4PEP Automotive, you choose 'the better way to PLM': more efficient, transparent and flexible – thanks to a comprehensive and interdisciplinary digitalization of the product development process.

4PEP Automotive – the better way to PLM

Automotive Reference Solution
– a faster way to success

Years of project experience with customers in the automotive industry are brought together in our **Automotive Reference Solution**. We do not come to you empty handed, but put forward a specific best practice approach. It presents reference requests, processes and data models in a clear overview, so that we can discuss them together with you. This way, you do not only gain time to move ahead with your project, you can also be certain that the basis of our joint work is a tried-and-tested approach that can be customized to include your specific requirements. This method is supported further by our industry-specific **4PEP Reference System**: The scope of our best practice approach is already mapped out in the system and is specified accordingly. Customizing as well as features, functions and processes are available to you immediately. In addition to that, our reference test cases guarantee optimal quality assurance of the system.

Satisfied customers speak for themselves ...

“The Product Development Record allowed us to provide our Product Development with an ‘Integrated Parts Management’. All product data are managed and controlled in an integrated manner. With this 4PEP solution, we considerably increased transparency in the product development process.”

Rafael Pahlke, Head of Global IT Processes and Applications, Benteler Automobiltechnik GmbH

“4PEP Engineering Change Management gives us a high level of security and transparency in the planning and steering of our worldwide change processes. The ‘return on investment’ was reached in a very short time.”

Helmut Peters, Manager Commercial Services, Leopold Kostal GmbH & Co. KG
