**<sup>4</sup>PEP Consumer Goods Industry – flexible and process-reliable**

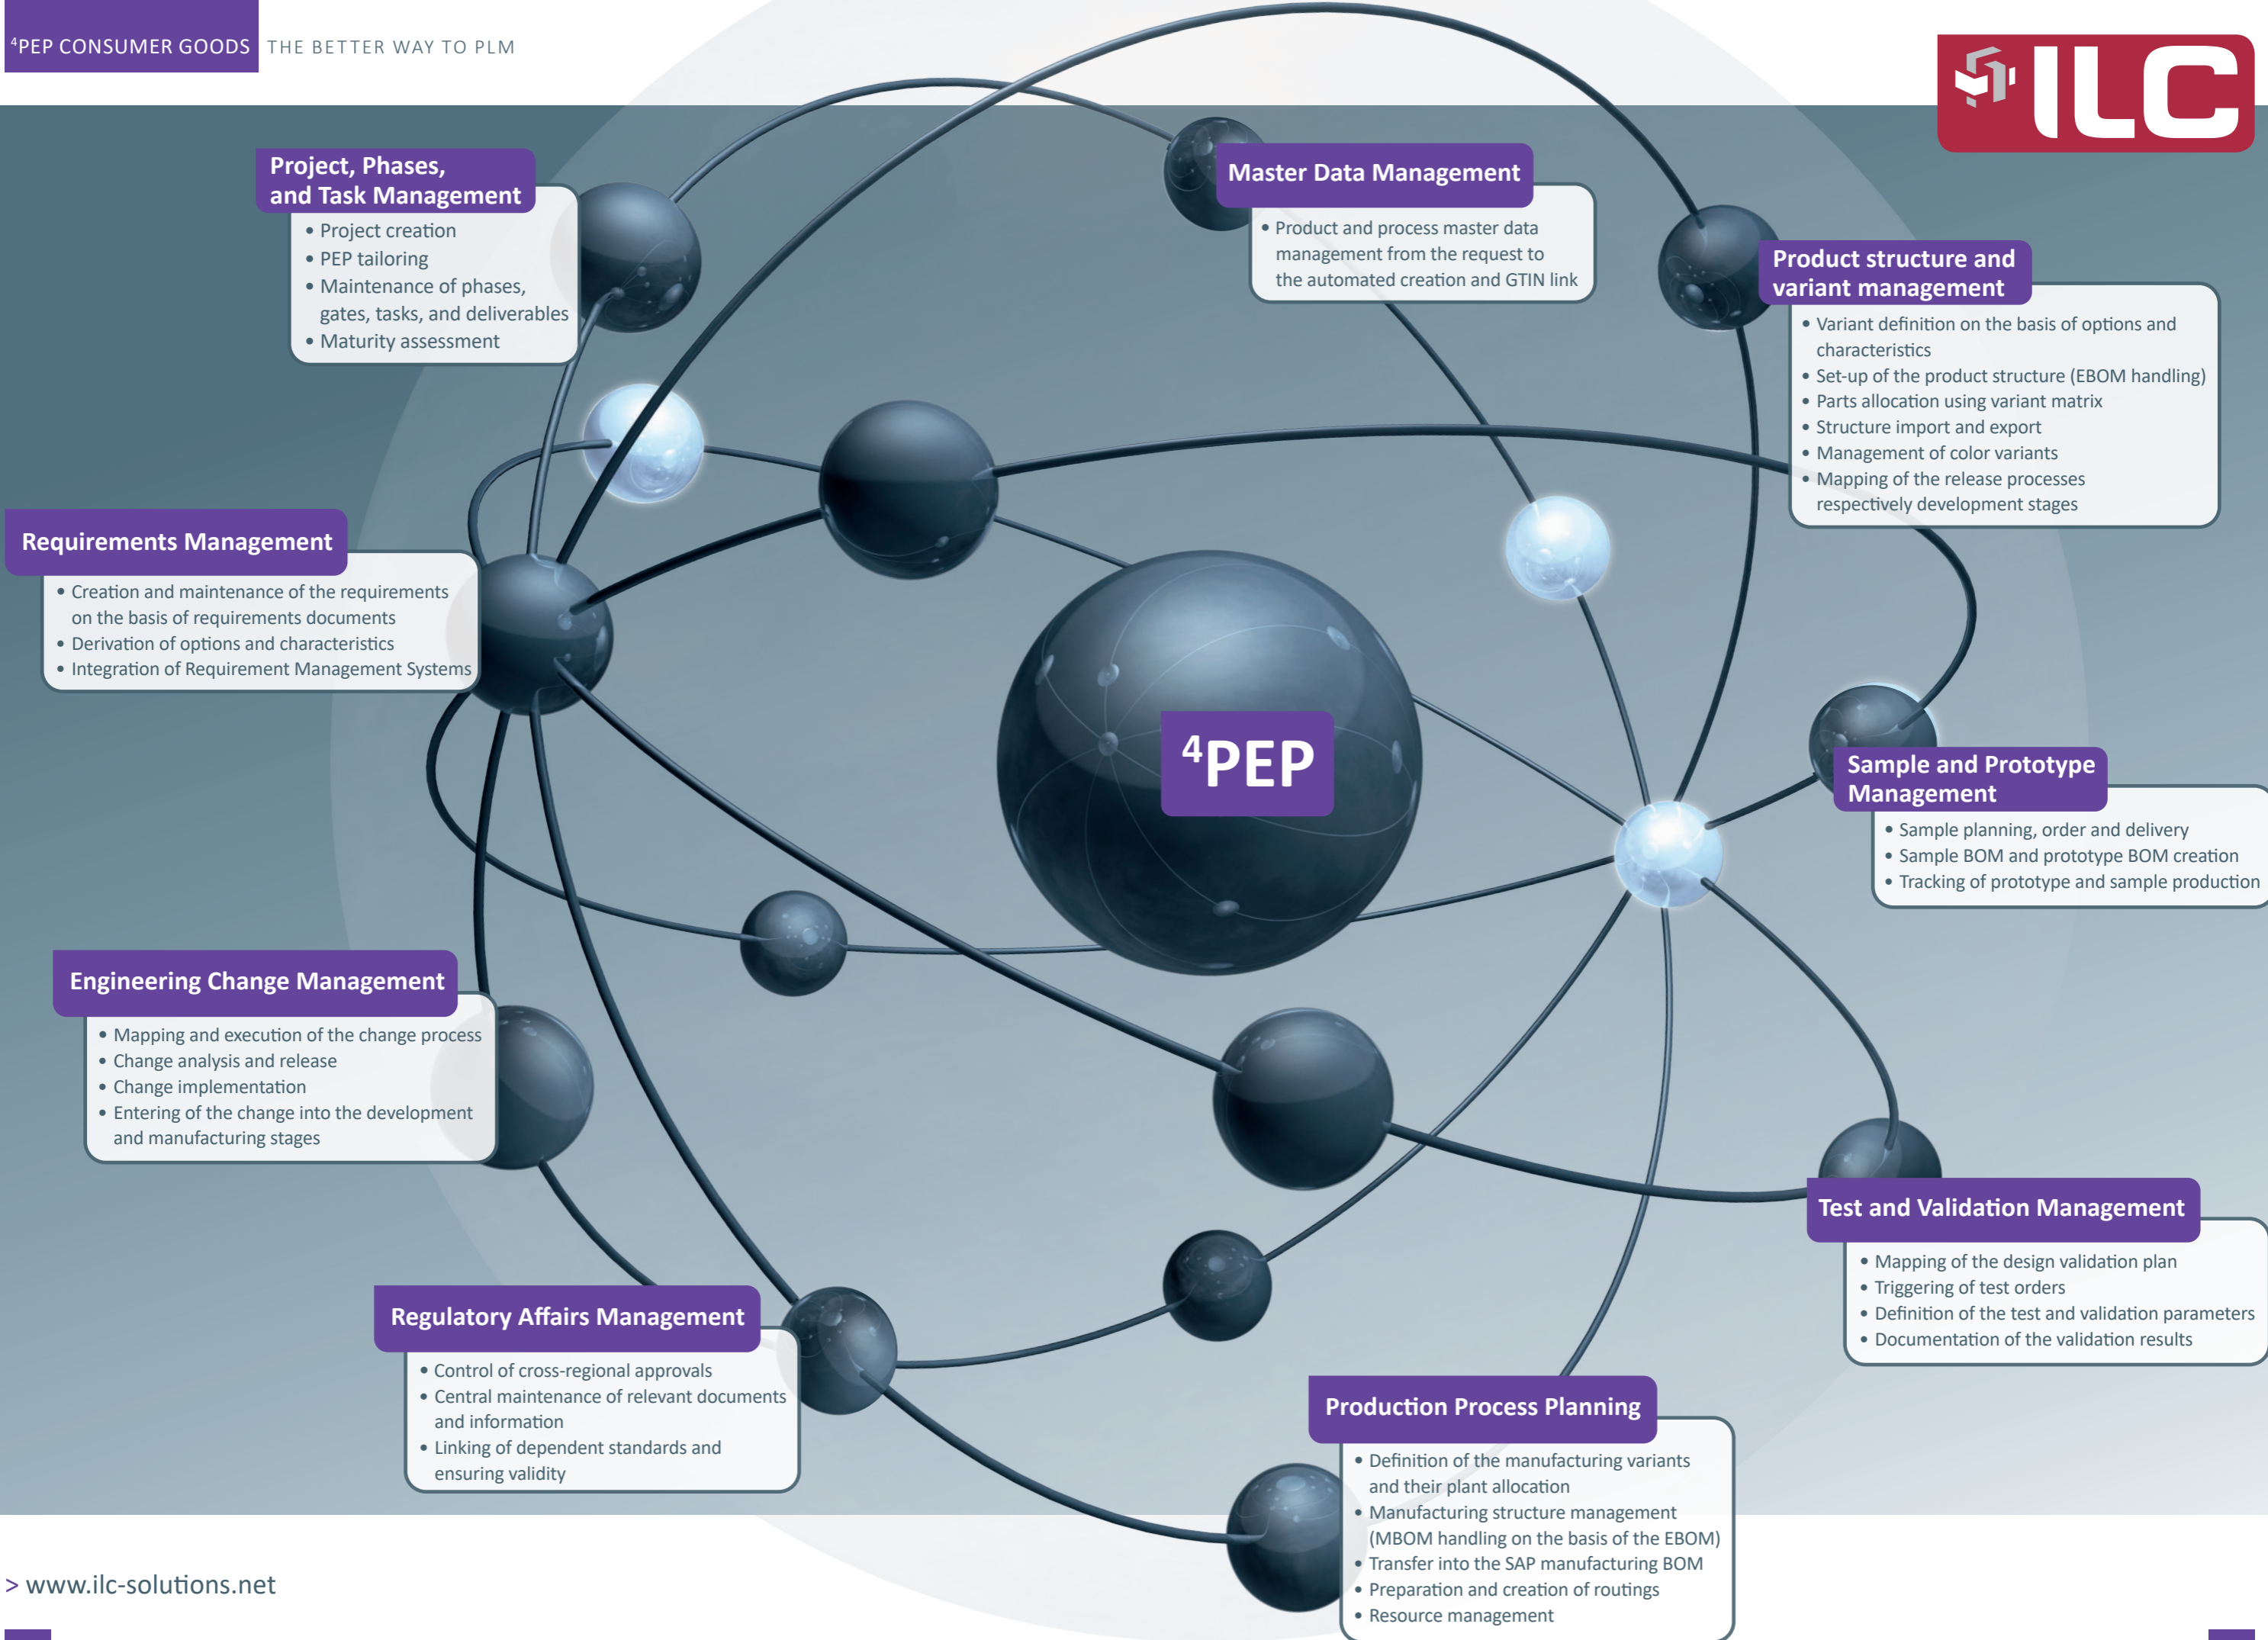

## PLM solutions for consumer goods

Due to its innovative strength, discrete manufacturing is one of the most important industries in the German economy. Industry 4.0 creates many new opportunities and challenges for the entire manufacturing industry. Competition is strong and products can be compared easily, that is why customer-specific product features are becoming an increasingly important sales factor. Rapidly growing numbers of variants and their management respectively their change in all core processes put ambitious demands on your PLM landscape.

The interaction of mechanics, electronics, and software needs to be realized in ever shorter product life cycles.

Systems engineering can help you to master the resulting challenges, from the definition of requirements, during the development and production phases, and up to the maintenance and information retrieval from sold products.

ILC knows the challenges of the consumer goods industry and supports your way to product development processes in a new dimension with excellent consulting services and software solutions.

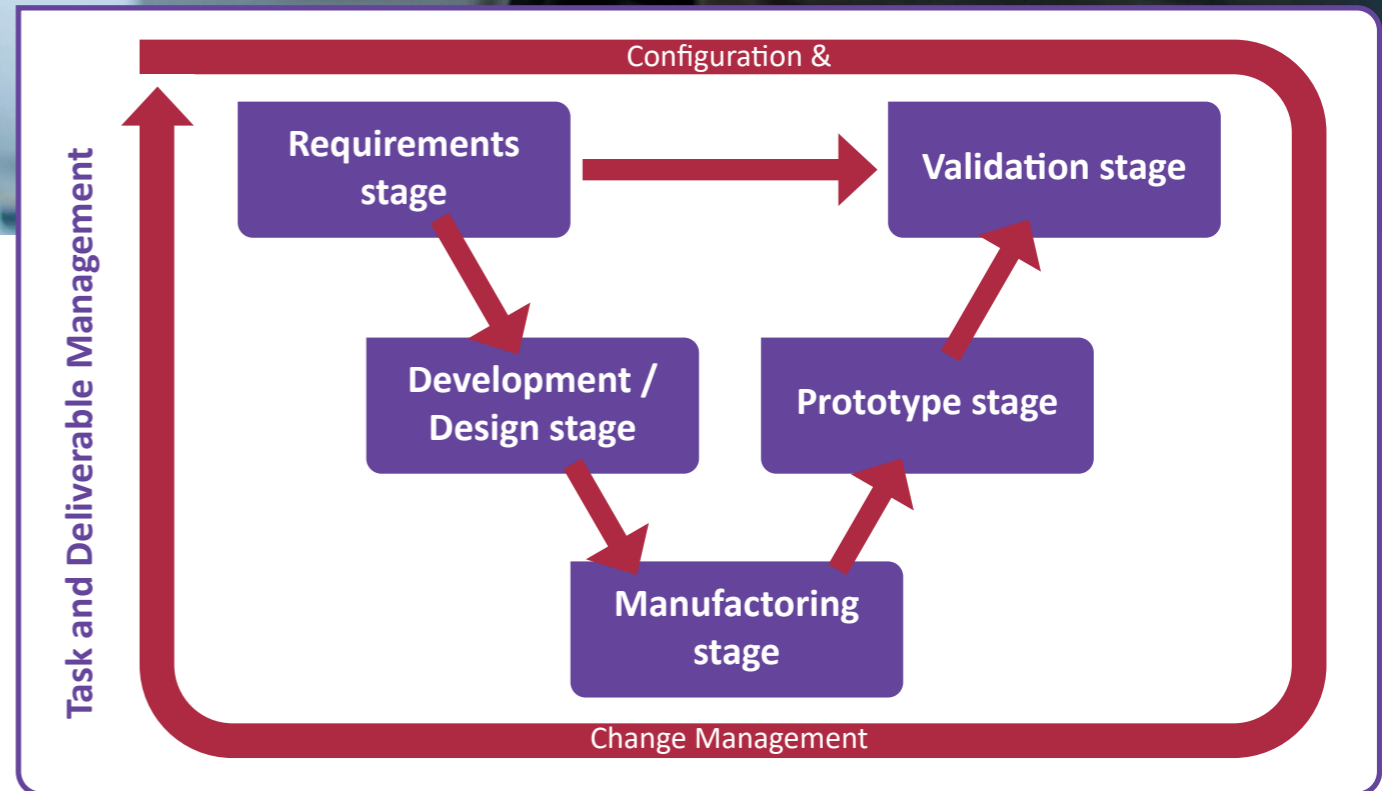

## Using the Consumer Goods Reference Solution for a fast way to success!

Our Reference Solution offers a seamless approach to control and complete the entire PLM process from the requirements to the validated product. Our solution is based on the Systems engineering methodology, which makes the development of even the most complex products possible. However, investing in the PLM process presents different challenges for each company: Processes must be analyzed and decisions must be made across departments.

True to the motto "think big start smart", it is possible to smoothly integrate individual modules into your entire system landscape. The expansion to an overall PLM system can be done without any obstructions. This way, the start into the "new" PLM solution remains transparent and is accomplished quickly.
